

Jordan Aqueduct Relocation

To prepare for the construction of a freeway-style interchange at 5400 South and Bangerter Highway, UDOT will relocate a segment of the Jordan Aqueduct that extends north and south in the area shown below. To accommodate the work, the southbound portion of the Continuous Flow Intersection (CFI) will be reconfigured to a traditional intersection. Drivers traveling south on Bangerter Highway will use a center turn lane at the intersection to turn left. Northbound traffic will continue to use the existing CFI to make left turns (see figure to the right). Work on the aqueduct relocation is anticipated to begin September 12 and extend through February 2017.

Project Overview

As part of its efforts to keep traffic moving on Bangerter Highway now and into the future, UDOT will construct freeway-style interchanges at 5400, 7000, 9000 and 11400 South. When completed, the improvements will be similar to the new interchanges on Bangerter Highway at 7800 South and at Redwood Road.

UDOT is currently working to acquire the properties needed for the interchange work. A Design-Build Contractor will be selected in early 2017 and construction will begin soon after, extending through late 2018.

What to Expect:

- Day and night work through September
- Mostly day work with intermittent night work October through January
- Lane closures, traffic shifts and delays
- Noise, dust and vibration
