Will work require lane closure for more than two (2) **CONSECUTIVE** days? YES NO

If YES, assessed fee: \$_____ (Please refer to the attached road closure fee schedule.)

MAP OF SIGNAGE MUST BE SUBMITTED WITH APPLICATION.

This excavation permit is for the construction of water, gas, sewer, storm drains, underground cables, pole lines or other facilities within the rights-of-way of the City of Taylorsville (the "City"). This permit is issued with the understanding that the Permittee is responsible for restoring the original ground or paved hard surface area to comply with the City's Engineering Design and Construction Standards including, but not limited to, repair, clean-up, backfilling, compaction, stabilization, paving and other work necessary to place the site in acceptable condition following the conclusion of the work or the expiration or revocation of this permit. All excavations shall comply with the City's applicable ordinances and shall be conducted in a manner resulting in a minimum amount of interference or interruption of street or pedestrian traffic. Inconvenience to residents and business fronting on the public way shall be minimized.

This permit shall not be transferred or assigned, and work shall not be performed under this permit in any place other than that specified herein. Nothing herein contained shall prevent the Permittee from sub-contracting the work to be performed under this permit; provided, however, that the Permittee shall be and shall remain responsible for the performance of the work under this permit and for all bonding, insurance and other requirements of the City's applicable ordinances and under this permit.

Suitable, adequate and sufficient barricades and/or other structures shall be available and shall be used where necessary to prevent accidents involving property or person(s). Barricades must be in place until all of the Permittee's equipment is removed from the site and the excavation has been backfilled and proper temporary gravel surface is in place, except where backfilling and resurfacing is to be done by the City; in which case the barricades, together with any necessary lights, must remain in place until the backfill work is actually commenced by the City. From sunset to sunrise, all barricades and excavations must be clearly outlined by adequate signal lights, etc. The Unified Police Department Taylorsville Precinct and the Unified Fire Department shall be notified at least twenty-four (24) hours in advance of any planned excavation requiring street closure or traffic detour.

It is further understood and agreed that the Permittee is responsible for any and all costs, damages and liabilities which may accrue or be claimed to accrue by reason of any work performed under this permit. The Permittee agrees to save the City, its officers, employees and agents harmless from any and all costs, damages and liabilities which may accrue or be claimed to accrue by reason of any work performed under this permit. The issuance and acceptance of this permit shall constitute such an indemnification agreement by the Permittee.

This permit shall neither be construed as imposing upon the City, its officers, employees, agents, volunteers or assigns any liability or responsibility for damages to any person injured by or by reason of the performance of any work within the public way, or under this permit, nor shall the City, its officers, officials, employees, agents, volunteers or assigns thereof be deemed to have assumed any such liability or responsibility by reason of inspection, the issuance of this permit, or the approval of any work.

The Permittee shall restore any public way to its original condition and an irrevocable letter of credit, escrow agreement, or cash deposit bond must be filed with the City prior to excavation. Repair of excavation perpendicular to traveled lanes shall be complete within seventy-two (72) hours from the time excavation begins. A penalty of \$150 per day shall be assessed for restoration not completed within such seventy-two (72) hour period without a written time extension from the City Engineer or other designee appointed by the City. Repair of excavation parallel to traveled lanes shall commence within ten (10) days from the time excavation begins and shall be completed within fifteen (15) days from the time excavation begins. A penalty of \$150 per day will be assessed for restoration not completed within such fifteen (15) days period without a written time extension from the City Engineer or other designee appointed by the City. Only a minimal open trench (to be determined by the City Engineer or other designee appointed by the City) will be allowed overnight. All construction activities shall utilize best management practices in such a manner as to minimize erosion and deposition of sediments and other pollutants into storm drainage facilities and/or waters of the State. All restoration work shall be guaranteed by bond requirements as the City has established by ordinance. If the Permittee does not restore properties to their original condition within the time indicated herein, it is agreed that the City shall make the necessary restoration at Permittee's expense including, but not limited to, charges against the bond, which expense shall be deemed to include interest at the current rate until paid in full.

Sidewalks and streets shall not be obstructed. Excavation materials shall be removed from the job site during the construction process. Sidewalk and roadwork are required to have the finished grades returned to original grade immediately upon completion of the site/job specific locations. Temporary materials may be used upon approval of the City Public Works Inspector. All concrete and asphalt replacement within City rights-of-way must be completed within forty-eight (48) hours of completion of all groundwork. All work must be inspected and approved by the City Public Works Inspector. All inspections shall be scheduled at least twenty-four (24) hours in advance by notifying the City at (801) 955-2030.

Certain jobs will be required to have a pre-construction meeting with the City prior to commencing any work. The City shall notify the applicant during the permit application process if this meeting will be required.

Street surfacing must be saw cut two (2) inches wider and two (2) inches longer than excavation and asphalt and must be one (1) inch thicker than existing and installed excavation and asphalt, leaving well defined edges and not gouged with a backhoe or other similar equipment. The trench section shall conform to standards noted in this permit. Monuments within the right-of-way shall not be disturbed without prior authorization from the City Engineer. Before the Permittee begins to dig, all public utility companies must be contacted for information pertaining to the location of utility company lines. The Permittee agrees to comply with all applicable ordinances and laws of the City and of the State of Utah, as well as comply with the manual on uniform traffic control devices – federal highway administration.

Permit valid for sixty (60) days from date of issuance.
